

COVID-19 Response Readiness and HRP Revision Guidance Note

6 April 2020

Annex I: Needs and Situation Monitoring in the Global Humanitarian Response Plan

Note to data collectors: insofar as possible, indicator data should be collected disaggregated by sex, age and disability to allow for a meaningful measurement on the impact or response effects on key groups with special needs e.g. women and girls, older people, people with disabilities, etc.

Situation and needs	Indicator	Rationale	Frequency	Responsible entities
Spread and severity of the pandemic	Number of COVID-19 cases nationwide	The incidence informs on the trajectory of the epidemic.	Daily	WHO
	Total number of death among confirmed cases nationwide	Death statistics inform on the severity		
	Number and proportion of new confirmed cases in health care workers			
	Case fatality amongst probable and/or confirmed hospitalized COVID cases			
Impact on operations	Government measures	Adverse effect on humanitarian operations	Weekly	OCHA
	Access		Weekly	OCHA
	Operational capacity of humanitarian organisations		Monthly	Agencies / clusters

Situation and needs	Indicator	Rationale	Frequency	Responsible entities
Food security	Market functionality	COVID-19 containment measures affect market food availability and access	Monthly	WFP
	Food consumption score	COVID-19 containment measures affect household food security	Monthly	WFP
	Reduced Coping Strategy Index (rCSI)	COVID-19 containment measures affect household coping capacities	Monthly	WFP
	Food and crop production estimates	COVID-19 containment measures affect production of food and cash crops	Seasonal, depending on harvesting periods for key crops	FAO
Education	Number of children and youth out of school due to mandatory school closures	COVID-19 containment measures affect children's education	Monthly	UNICEF
Sexual and reproductive health	Number of Emergency Obstetrics and Neonatal Care services that meet standards of care in areas of high incidence of COVID-19 cases	COVID-19 containment measures and high COVID-19 incidence rates affect pregnancy and safe delivery	Monthly	UNFPA
Gender Gender-based	Number of GBV services accessible to survivors in areas with COVID 19	COVID-19 containment measures lead to families living in confinement for	Monthly	UNFPA

Situation and needs	Indicator	Rationale	Frequency	Responsible entities
violence (GBV)		indeterminate periods, increasing the risk of GBV.
